

Weekly Status Report – SE2

Project Title: MyFitnessBud

4/26/26

WSR 10

Ishwari Patel

Activities Completed This Week

- Daily Scrum: Team conducted meetings to discuss progress, blockers, and next steps.
- Sprint 5 Execution & Wrap-Up: Completed frontend and backend tasks for Sprint 5.
- Sprint 5 Review: Demonstrated implemented features and received feedback.
- Sprint 5 Retrospective: Discussed successes, challenges, and improvements for the next sprint.
- Sprint 6 Planning & Backlog Grooming: Prepared backlog items for Sprint 6, prioritizing integration features.

2. Features Implemented by me

- Workout Page:
 - Users can log different workouts with type, duration, and calories burned using $\text{MET} \times \text{weight} \times \text{time}$ formula.
 - Stored workouts in localStorage for later integration with calories page.
- Snack Page:
 - Users can add snacks, save them as favorites, and log daily calorie intake.
 - Display of calories consumed per snack and ability to remove entries.
- Calories Page:
 - Aggregates data from snacks and workouts.
 - Calculates total calories consumed, calories burned, maintenance calories, and daily calorie deficit.
- Favorites Feature:

- Users can mark snacks as favorites; favorites are saved in localStorage and displayed on the Favorites page.

3. Documentation and Design

- Reviewed and updated:
 - Architectural Design
 - Detailed Design
 - UI/UX Layouts for Workouts, Snacks, and Calories pages
- Updated coding standards and documentation to reflect integrated features.

4. Testing & Quality Assurance

- Validated calorie calculations on workouts and daily calorie deficit on Calories page.
- Tested snack addition, removal, and favorites functionality.
- Performed cross-page integration testing to ensure consistent data flow.

Overall Status: On track

Our team made significant progress in integrating all major features and preparing for midterm evaluation. Frontend and backend modules are now well-connected, and the app provides a working calorie tracking and workout logging system.
